#DLT4ALL, DECENTRALIZATION GOES MAINSTREAM!

LIKE NODES IN A CHAIN

Among all the question marks brought to the table by the disastrous Corona virus, one thing is certain: **In Tech We Trust**. While leaders debate on how to fund health systems and relaunch economies, **digital ecosystems** had the shortest time to market for envisioning and delivering solutions to the paralyzed business as usual, causing the least distress to their people and ventures. **DLTs** have been widely employed to develop **Virus Tracking Systems** that allow researchers to study its spread by **gathering data** from validated sources (see Acoer's [HasLog dashboard](#)), and **platforms** that offer **online consultations** or even **verify the risk** of infection based on recent activity and commuting (such as [these](#), that yet [require improvement](#), they say).

Blockchain is also deemed to be useful to **prevent** the crisis in the first place, by **optimizing healthcare records** while also **protecting privacy**.

Finally, **DLT** applications are being looked as measure to reduce uncertainty through **smart contracts**, where [public bodies automatically release cash](#) reliefs and insurances when emergencies arise. Examples are abundant on how **DLTs are effective in times of emergency**, which is why they [are on top management priority agenda](#). This momentum is expected to last well after COVID-19 has gone: businesses seek long term resilience against unexpected turmoil, and so do we. Then, there is nothing better than to become *distributed, yet connected*.

DLTs FOR COVID

Several DLTs solutions have been quickly developed to serve the global fight against COVID-19. Some of them are already available, some others are on the way. Here, some food for thoughts for innovators, policy makers and investors.

1,5Y IN THE GAME

After 1,5 exciting years focused on gathering and developing contents, DLT4ALL journey into exploring and explaining DLTs keeps going.

WHAT'S UPCOMING

Case studies, learning materials, online events, and more!

1,5 YEARS IN THE GAME

Quite some water has been under the bridge since the DLT4All project was kickstarted in Nicosia 18 months ago. Since then, we mapped our audience and identified four target groups of stakeholders, namely entrepreneurs, early stage investors, incubator managers and students. With their needs in mind, project partners met physically and virtually to craft an **innovative and interactive curriculum on Blockchain and DLTs**. Get a brief recap on our activities so far through this read: [DLT4All 1 Year in the Life](#). Here you can browse the Lab events held locally by partners, and the [Blockchain Innovation Workshop](#) recently held in Como, Italy. It was all good discussion and fertile brainstorming, and **more is coming**.

The [course curriculum](#) is now fully published and accessible on our website, together with case studies. The curriculum outlines the 8 Modules covered by the course, offering a brief intro and the syllabus. **Also, 25 use-cases** were selected by our experts to showcase how each topic is being applied in real life. [Case studies are available](#) on DLT4ALL website and represent a valuable tool to empower the audience to think critically and master practically the implications of DLTs on how we think of and make transactions. **Get in the game with us** for the second half of this exciting journey! [Start learning about Blockchain today](#).
